At an absolute minimum, this server should have a PIII-compatible 600 MHz or newer processor with 1GB RAM.. Other system requirements are the same as the host operating system GSS Server: We recommend running the GSS Server components on a modern, dedicated server with a 1 GHz or faster processor with 1 GB or more of RAM.. If the database will be hosted on the same computer as your GSS Server, you need a minimum of 1GB additional memory, with an additional 4GB recommended.

GSS Agent (DAgent, and ADLAgent): GSS Agents require network connectivity and at least 10 MB disk space.
